

## Results and Current Status of RIKEN International Frontier Research on Earthquakes

# RIKEN International Frontier Research

Group on Earthquakes Uyeda Seiya

The purpose of the RIKEN International Frontier Research Group on Earthquakes (RIKEN-IFREQ) is to attain comprehensive understanding of the electromagnetic phenomena related to earthquakes. For this purpose, it aims to establish what really happens through observations and to clarify their physical and geolo-geophysocal mechanisms through experimental, theoretical and field studies. In the session, we would like to present the current status of the project and some DC and ULF ranges results.
