

Future plan for survey of outer solar system objects

Jun-ichi Watanabe[1]

[1] PR Center, Nat.Astron. Obs. Japan

We are carrying out a survey for outer solar system objects by using Kiso 105cm Schmidt telescope. We surveyed 17 square degrees until now. Unfortunately we could not discover any new objects.

We plan to use prime-focus camera of the SUBARU telescope, and Wide-field camera of 2.2-m telescope at the European Southern Observatory. In this presentation, we introduce our plan for survey of the outer solar system objects.
