

The resident briefing of the disaster prevention map of Hakone Volcano

Hiroko Makita[1]; Masato Koyama[2]

[1] Eartheon; [2] DIST, Education, Shizuoka Univ.

The seismic swarm with abnormal gas and diastrophism was generated in Hakone Volcano in 2001. This was undertaken, the Hakone-town investigated the activity characteristic of Hakone Volcano. It made it public as the disaster prevention map of the Hakone Volcano. Moreover, Masato Koyama who was the committee of Hakone Volcano disaster prevention MAPEDIT advisory committee explained the theses map to the resident. Here, we report on the situation of the resident briefing and participant's opinion.

We held the resident briefing in five regions(Yumoto,Miyanoshita,Miyagino,Sengokubara,Hakone)in the Hakone-town. We explained the case with the blessing of basic knowledge concerning the volcano, the history of Hakone Volcano, Seismic swarm, Volcanic gas, Hazard map, and Academic training.

When a lot of residents were interested in the activity of Hakone Volcano, and abnormality such as seismic swarms occurred, a prompt dissemination was requested according to the question and the questionnaire by the resident briefing. Especially, to feel the change in the volcanic activity such as the seismic swarm and rumbling of the earth to be familiar, the resident in the Ohwakudani surrounding area is requesting a fine dissemination.
