Future Planetary Exploration Working Group of Japanese Planetary Science Society is discussing planetary explorations that will be strongly supported by this community. Then we started "Planetary Exploration in a Coming Decade" activity last year aiming to organize a new mission to be launched between 2017 and 2027. The second stage of the activity is ending after this session. Each proposal of the second stage will be reported in Yu-Sei-Jin journal. Then the third stage starts to reinforce technical aspects of the proposals.
