Viewing the Earth's Climate from Space

FREILICH. Michael1*

Earth is a complex, dynamic system we do not yet fully understand.

The Earth system, like the human body, comprises diverse components that interact in complex ways.

We need to understand the Earth's atmosphere, lithosphere, hydrosphere, cryosphere, and biosphere as a single connected

Our planet is changing on all spatial and temporal scales.

This presentation will highlight how satellite observations are revolutionizing our understanding of and its response to natural or human-induced changes, and to improve prediction of climate, weather, and natural hazards.
