

Paleomagnetic direction and intensity of the Aso-2 pyroclastic flow

Hidetoshi Shibuya [1], Kaori Hirata [1], Satoshi Honjo [1]

[1] Dep't Earth Sci., Kumamoto Univ.

Paleomagnetism of Aso-2 pyroclastic flow, which was reported to have very steep inclination, was performed in 7 sites. Paleointensity study was also carried out. The results showed that the ASD was not larger than other pyroclastic flows, and paleointensity was only slightly weaker than present field, in spite of the low VGP latitude.
