

Deep-tow camera survey of the continental margin off Fukushima, Japan - results of KY98-08-FKS cruise -

Kenji Hirata [1], Iwase Ryoichi JAMSTEC Long-term Deep Seafloor Observation and Research Project Team

[1] DSR, JAMSTEC

Sea-beam and deep-tow camera suveys were conducted off Fukushima, Japan in July 1998.

It was found that there are stepwise terraces, parallel to NNE-SSW or ENE-WSW, with a width of 1.5 n.m to 3 n.m, and that a few terraces seemd to be bounded by steeply dipping faults showing its vertical displacement of more than 10 m.
