

Verification of Macroscopic Anomaly - Observation of Alligators' activity, - a preliminary report -

Yoichi Noda[1], Toshiyasu Nagao[2]

[1] Riken, [2] Earthquake Prediction Res. Center, Tokai Univ.

It is well known that anomalous animal behaviors are frequently observed prior to earthquakes as one of the so-called "Macroscopic Anomalies". However, it is very difficult to define "what is anomaly". The most important problem is a lack of continuous monitoring of animal behavior in scientific way. We have just started to monitor alligators by a video camera recorder in the Izu Atagawa Tropic and Alligators Garden, Izu Peninsula.
