Resistivity Structure of Shallower Part of the New Lava Dome of Unzen Volcano

# Toru Mogi[1], Yoshikazu Tanaka[2], Takeshi Hashimoto[3], Djedi S. Widarto[4], Takuya Takeuchi[5]

We carried out air-borne electromagnetic survey and electrical resistivity survey at the lava dome in Unzen Volcano. The air-borne electromagnetic survey revealed that the resistivity of the dome is more than several thousands ohm-m, and relatively low resistivity structure are appeared at the foot of the dome.
