

Microorganisms in BIF

Kazue Tazaki[1]

[1] Dept. Earth Sci., Kanazawa Univ.

Microorganisms found in Pre-cambrian BIF in Brazil, Canada and Australia, suggesting the primitive Earth eco-systems. Electron microscope observation of BIF revealed a variety of biomineralization. Quartz, hematite, pyrite, Mn-minerals and graphite were formed with bacteria. Microorganisms play an important role in history of geo-, aqua- and bio-systems.
