

Recent reseach of the magnetosphere of the Jovian planets

Masato Nakamura[1]

[1] Earth and Planetary Sci, Univ. Tokyo

Galileo probe has provided a new knowledge about the Jovian magnetosphere. Now Cassini probe is approaching Saturn after a fly-by Jupiter in Decedmber 2000. The studies by Voyger 1 and 2 were just in the discovery phase, and now our knowledge with these probes are very much advanced. Recent reseach based on the data from probes will be reviewed.
