

## Method of event discrimination with pattern matching (application)

# Shin'ya Tsukada[1], Kazuo Ohtake[2]

[1] Seismological and Volcanological Dep., J.M.A., [2] JMA

We proposed the new approach "method of event discrimination with pattern matching" that determines seismic events precisely, to increase reliability on automatic reading of seismogram and hypocenter determination. We implemented a system using this method and brought up to operation. We report a parameter study and an operational results of this system.
