

Evidence for frictional melting in accretionary prism

Eisei Ikesawa[1], Arito Sakaguchi[2]

[1] Dept. Geol, Univ. of Tokyo, [2] Natural Environmental Sciences, Kochi Univ.

Pseudotachylytes occur in Cretaceous boundary fault between Okitsu Melange and Nonokawa Formation, Western Kochi Prefecture, southwest Japan.

It follows from this that frictional melting occur in inter-plate earthquake. It gives new idea to understand trench type earthquake mechanism.
