

Tectonics near the 2000 Tottori Seibu Earthquake

Ryohei Nishida[1], Kazuya Matsuyama[2]

[1] Civil Engi, Tottori Univ, [2] School Subject Edu.,Tottori Univ

The Tottori Seibu earthquake occurred in this area on 6, Oct., 2000. Seismic activities in the San'in district show a belt-like distribution along the Japan Sea coast. And this distribution agrees well with the geological structure and tectonic zones. Recent almost earthquakes in this area show left lateral fault types to analyze fault plane solutions.
