

Seismic Activity in Northern Hyogo prefecture and Surrounding Regions

Ryohei Nishida[1]

[1] Civil Engi, Tottori Univ

On 12, Jan., 2001, a middle earthquake occurred in the northern Hyogo prefecture.

The tectonic stress in this area were the strike slip type of almost WNW-ESE compression. But the main shock of 2001 show a large irregularity, N-E compression. It is unexplainable.
