

## Compiling of geothermal (Heat Flow) data (for these decades) around the Antarctica

# Masato Joshima[1], takao saki[2], Toshiyasu Nagao[3]

[1] Marine Geophys. Sect., Marine Geol. Dept., GSJ, [2] JNOC, [3] Earthquake Prediction Res. Center, Tokai Univ.

JNOC has continued marine geological and geophysical studies on surrounding area of Antarctica for these 20 years using marine geological research vessel "Hakurei-maru", she had retired from scientific survey at the end of 1999 physical year (2000/03/31). Several number of heat flow data were obtained every year and total amount became 124 from TH80 to TH99. The results were open for former decade by Nagao as compiled results of world heat flow data. The heat flow data for the latter decade were reported as tentative values and it is necessary to add check and recalculation for final heat flow values.
