After completion of the KSP project in the Communications Research Laboratory, a 11m radio telescope at the Tateyama VLBI station was presented to Gifu University. The construction of the 11m radio telescope was started in January 2002, and will be completed in spring 2002. VLBI observations will be started in summer 2002. This paper shows the present status of the telescope and the future observation plans by using the 11m telescope.
