

## The present situation of earth scientific education in elementary and high school

# Mutsumi Nakai[1]

[1] Education,Daito Bunka Univ.

The earth science teachers in Japanese senior high school, have decreased. Therefore, many senior high schools in Japan give no earth science class. Presently, earth scientific education of elementary school and of junior high school becomes more important than of senior high school. However, teachers of elementary school and of junior high school, are not good at earth science. Accordingly, it is necessary for earth scientists in Japan to make practical and visual teaching materials with the office of education Kyoiku-iinkai.
