Seismic-wave simulation using the hybrid method of the discrete-wavenumber and the three dimensional finite-difference methods

# Hidenori Kawabe[1], masanori Horike[2], Kaoru Kusakabe[3]

We present three dimensional seismic ground motion simulation using the hybrid method of the discrete-wavenumber (DW) and the three dimensional finite-difference (FD) methods. And we applied the DW-FD hybrid method to the August 25, 2001 earthquake (MJMA5.3) occurred in the South Kyoto Prefecture.
