Timing of Tectonic Inversion of the Nagamachi-Rifu Fault Estimated from FT Ages and Diatom Biostratigraphy

Osamu Fujiwara[1], Yukio Yanagisawa[2], Masanori Shimamoto[3]

[1] JNC, [2] Geological Survey of Japan / AIST, [3] Tohoku Univ. Mus.

Timing of tectonic inversion of the Nagamachi-Rifu fault was estimated to be the early Late Miocene (around 9 Ma) from the analyses of the reflection profiles, FT ages and diatom biostratigraphy.
