The project of Astro-highschool network(Astro-HS) has been continued for five years since 1998; Leonid meteor shower event. We have succeeded to collect detailed information about dust tube of Leonids under a good condition in 2001 season. And not only Leonids but also many themes(a total lunar eclipse, an occultation of Jupiter and so on) is begun from 2000. The total number of the high school student who participated in the past 5 years exceeds 10,000. This project is being supported by high school teachers, social education facilities staff members and astronomy researchers, astronomical amateurs, and so on.
