

# Characteristics and Reorganization of Earth Science for Japanese high school

# Mutsumi Nakai[1]; Fumitaka Kutsuma[2]

[1] Education,Daito Bunka Univ.; [2] Kawagoe-Hatsukari Senior High School

Earth Science taught in Japanese high school has been divided mainly three parts, meteorology, astronomy and solid earth science. We think it is better for high school Earth Science to be reorganized, such as planetary science or earth environmental science. In addition, we have to made characteristic curriculum and teaching materials for almost high school students who do not like mathematics and calculation, and for almost high school science teachers who are not earth science specialists.
