

## Quality scoring system for quality evaluation of hydrochemical data

# Ryoji Furue[1]; Teruki Iwatsuki[1]; Hideki Mie[1]; Mizuno Takashi[1]

[1] JNC TGC

Quality scoring system of hydrochemical data is made for the purpose of judging whether quality of each data is available for hydrochemical modeling or not. More than 200 hydrochemical data has been obtained from boreholes in the Tono area. Every data is scored on quality control items from the point of view of drilling contamination and sampling method.
