

The Integrated Study Time combined with the Space Quiz as the In-situ Study

Yuzo Watanabe[1]

[1] JAXA

Very little with respect to the space and astronomy has been adopted as an appropriate subject for the hours of integrated studies started in the curriculum of elementary school through high school. Nighttime observation is commonly unpopular, because it is dark, chilly in winter, awful, dangerous rarely and depending on the weather. Keeping the nighttime observation by itself, the fantastic space quiz is proposed as one theme for the integrated studies. +++ For example, Long, long ago, Peach boy (Momo-taro) who was born from the peach attacked and defeated bad demons in the Demon Island with his three followers, a dog, a monkey and a pheasant. Answer who will go to the space among them in order in the early stages of the space development. The answer is the dog, the monkey and the pheasant, exactly the quail who is a kind of the pheasant. +++ The in-situ study with the space quiz will be impressively developed as the beginning of the comprehensive studies. The results will be described with their reports written for themselves later.
