

# Laboratory experiments seen with image records

# Satoshi Sakai[1]

[1] Human and Environ. ,Kyoto Univ

There are two ways to record experimental results. One way is to record experimental scalar values, the other one is to record image information such as pictures. The latter has disadvantages when the record is compared with theoretical results, but it has powerful impact and convince exceeding fine theory. In this talk, some example of such image records which have been recorded at Kyoto University.
