

Liquefaction bottle, Licky 2005

Yasuaki Nohguchi[1]

[1] National Research Institute for Earth Science and Disaster Prevention

Nohguchi devised the liquefaction experiment bottle, Lichy, which can repeat liquefaction repeatedly in the airtight container completely filled with water and sand, and is using it for education / spread. In this report, the newest, Licky 2005, such as a collapsing resettable standing-close-together skyscraper group, is introduced.
