New dense GPS network around Tokai region

New dense GPS network around Tokai region is established by Japanese university consortium for GPS Research (JUNCO) which mainly consists of University of Tokyo (Earthquake Research Institute), Shizuoka University, University of Tokai and Kyushu University. The region is widely noticed for slow slip (or slow earthquake) which is occurring continuously more than four years from 2000 in the eight years history of GPS network by Geographical Survey Institute (GSI). We have installed about 60 more GPS stations in the area where about 40 GPS stations by GSI are available. Using the combined 100 GPS stations, more detailed feature of the slow slip in Tokai region is expected to observe.

We will show some preliminary results of the combined new GPS network which is now 2.5 times denser than previous one.
