

# A Tentative Proposal for Astronomical Education Standard

# Jun'ichi Arimoto[1]

[1] Tounan High School

The Course of Study for Science have many problems. For example, in elementary school, astronomical study is so primitive.

And Students does not study astronomy from 5th grade in elementary school to 2nd grade in junior high school, for 4 years.

In USA, there is a National Science Education Standard. At Japan, I think educational curriculum have to be made in classrooms. So I suggest to make a tentative proposal for astronomical education standard.
