

## 3-D Video of Leonids 2001

# Shinji Toyomasu[1]

[1] Misato Observatory

<http://www.obs.jp>

We report the direct 3-D video image of the Leonids meteor shower November 19, 2001. It was taken by I.I. in two points.

Observation point:

A. Wakayama Pref. Misato-cho Misato-cho cultural center

B. Wakayama Pref. Kanaya-cho Arida Kyohou grape village

The distance between A and B:

10.5Km

Our method of 3-D vision is depends on the projectors and the deflecting plates. There are a lot of parts processing it now, and I want to announce the result in the hall. If it is possible, we will project them.

Moreover, we will show the video compressed by the image storage about the video taken in A point.
