Data analysis using CDF file of the Akebono VLF-MCA data

Yuki Ozaki[1]; # Yoshiya Kasahara[1]; Yoshihiro Takata[1]

[1] Kanazawa Univ.

We introduced a CDF format to the VLF data onboard the Akebono satellite. The data format was designed based on the ISTEP/IACG guideline. In order to improve the accessibility to the data, we adopted several kinds of intelligent functions designed in the CDF. In the present paper, we report the features of our MCA data format and some results which was obtained by combining the CDF data and our Akebono VLF database system.
