Digital Photogrammetry of late Holocene fold scarps along the Yoro fault

Daisaku Kawabata[1]; Tatsuya Ishiyama[2]

[1] Geoscience and Technology, AIST; [2] Active Fault Research Center, AIST

We made digital elevation models of late Holocene fold scarp along the Yoro fault in central Japan based on digital photogrammetry, to define continuous along-strike distribution of scarp heights as a proxy for amounts of vertical slip.
