A practice report of earth science education by a joint of high school and university

Nobuyuki Yamada[1]; Takashi Hirowatari[2]

[1] Fukuoka University of Education; [2] Tokai University Fuzoku Daigo Senior High School

We had planned and carried out the earth science classes and experiments by a joint of high school and university in SPP (Science Partnership Project by Japan Science and Technology Agency). A main title of the classes is 'Let's explore our hometown-Part of topography and underground structure-', have three section and 12 hours in total. Although we read the classes level was a little too high for the students, we think that the interests for science and their hometown rose up more than before these lectures. These actions indicates us the need of educational solid.
