In Japan, the correspondence of soil and ground water pollution has been made by three legal systems in addition to 1970 'law on the pollution control of the soil in farm land' and 1996 'prohibition of the underseepage of the Water Pollution Control Law toxic substance by the revision' and 2003 'the soil pollution remedy'.

Present state of soil and ground water pollution by these legal system is arranged based on the proclamation material and examine the problem in the investigation.
