## A Series of Small Scientific Satellite with Flexible Standard Bus

# Hirobumi Saito[1]

[1] ISAS, JAXA

Japan Aerospace Exploration Agency has a plan to develop small satellite standard bus for various scientific mission and disaster monitoring missions. The satellite bus is a class of 200-400Kg mass with three-axis control capability of 0.02deg accuracy. This paper describes the characteristics of the small satellite standard bus, comparing with overseas examples.
