

## Relation between water table and radar reflective surface

# Kyosuke Onishi[1]

[1] Civil & Earth Res. Eng., Kyoto Univ.

Groundwater hydrologists want to know the distribution of groundwater flow and pore pressure.  
Geophysical exploration can provide the distribution of water content but pore pressure is difficult.  
These differences will be mutual suspicion between groundwater hydrologists and geophysicists.  
I want to discuss the difference of physical quantities which groundwater hydrologists and geophysicists take notice.
