When based on the degree of activity at the time of the disaster prevention including the activity at the time of the disaster of the latest our country, creation of the disaster prevention manual which materializes the environmental maintenance which enables improvement in synthetic disaster prevention power on each level, and it is the most important pressing subject until it results in a company or an individual from administration including the central government of a country.

It applies from September 11, 2000 on 12, and a typhoon No. 14 brings rain called the 567mm of the total greatest rainfalls in the history of the Nagoya Local Meteorological Observatories observation, and the 93mm of the maximum time rainfalls to the Tokai district centering on Aichi Prefecture, and a July 13, 2004 Niigata heavy rain is a matter fresh in memory.

And in the latest, the Noto-Hanto earthquake of the Hokuriku district is in the tense situation which is yet unpredictable.
