

Spring water in Kinki region 2

Shibayama Motohiko Kansai springing water survey group[1]

[1] -

We announced the part about the springing water in the Kinki region last year. Afterwards, because data increases and the entire new analysis was done, it announces here. Distribution, the pH, and the hardness of the springing water were announced last year (Springing water survey Kansai, Hiraoka, 2007).

This announcement describes making the analysis of the springing water data that has been investigated up to now and the part as the book public etc. It is 347 places that the investigation ended as of January, 2008 though there are 502 places raised to the list. The geographical distribution of the pH and hardness in the Kinki region, and the relation to geological features, etc. are described. Moreover, a part of current study results was made public as books. The books were
