We made the tsunami disaster prevention pamphlet and the poster for the child in Indonesia, distributed it, and announced the result in the year before last and last year's JpGU etc. This poster reports on the spread activity afterwards. The tsunami pamphlet made in 2006 was brought in June, and we distributed it directly in a certain village.

However, TSUNAMI was generated in the southern part of the Java Island at the beginning of July. All members survived in the village where the pamphlet and the poster had been distributed before that(Shibayama et,al.2007).

The putting work of pop up part in pamphlet went out was executed as a volunteer work last year (2007). The putting work was done by the member of the SHIRASAGIKAI (All Nippon Airways cabin crew OB association).

Moreover, the spread activity of the tidal wave pamphlet in Japan used it in the elementary school in Wakayama Prefecture in 2006(Shibayama et,al.2007). In the Geo carnival that had been held in Osaka in 2007, the picture book from which TSUNAMI went out intended for the child was made. A similar activity was done in the disaster prevention event of Wakayama Prefecture Kushimoto-cho. The tsunami pamphlet from which about 200 children in the Geo carnival. about 100 children went out was made in the disaster prevention event in Kushimoto-choof

Moreover, Nakanoshima Lions Club plans to support the activity of the tidal wave pamphlet as an activity in fiscal year 2008 on the cost side.
