Groundwater around the northern part of the Kego fault, Fukuoka, Japan

Sachihiko Taguchi[1]; Kouki Oba[1]; Kazuma Hishikawa[1]; Tsutomu Hosokawa[1]; Kazuya Shinokura[1]

[1] Earth System Science, Fukuoka Univ.

Groundwater around the Kego fault in the central part of Fukuoka city has been investigated. The isotopic data of the groundwater along the fault show that their origin was far from the area where is higher in elevation, indicating groundwater can migrate a long distance along faults.
