

Spatial representation in geoscience and spatial structure

Yohta Kumaki[1]

[1] Senshu Univ.

Geospace has its characteristics and structure, and is one of the research object as well as the framework of reserch object in geoscience. In the thematic cartographic viewpoint, the spatial representation in geoscience is classified as follows:

1. Representation of spatial characteristics and structure

1) Land classification and regionalization; 2) Distribution; 3) Spatially continuous change of value

2. Geospace as the framework (areas, lines or points as statistics or observation zones)

3. Complex of 1 and 2
