On the visualization of geoscience data

Kiyoyuki Kisimoto[1]

[1] GSJ, AIST

Recent 'virtual reality technology' makes it easy to handle huge amount of geoscientific data to visualize as we see them real, then to understand in perceptual manner. Visualizing the geoscience data in 3D-map, 3D-like-movie (flyby movie) and 3D-movie (eye-glasses aided) are used for discussion.
