

## General Image of Our Goal in a Far-Future

# Shigenori Maruyama[1]

[1] Earth and Planetary Sci., Tokyo Institute of Technology

We need to image-up and brush-up our earth-environment and human being in a Far-Future, in order to make continuous efforts to solve our near crisis which consists chiefly of sudden increase of world population and chemical pollution with related generation of new-type microorganisms. These may clarify the clear aspect to do actions with consensus.

We human being experienced 5 superrevolutions through the history, namely 1st superrevolution of the Agriculture and pasturage, 2nd one of civilized City, 3rd one of Spirits and Cultures, 4th one of Industries and the last one of ICT now on going. The 4th and the last ones provide us the chemical pollutions and confusion of knowledge, respectively. On the other hand, the nation style changed in one direction into that with democracy. This is clear because the democratic nations increase suddenly from 3 at 19th century to almost 100 nations right now. The democracy is fundamental in considering the war mechanics, as noticed in Kant's theory. The last superrevolution provide us a borderless world and less-authorities of nation and nation borders. This suggests the concept of distance on the earth becomes less meaningful.

All of these implies our Far-Future world is as follows ; SGU, Supergovernmental Union, areal 6 or 7 Unions, nations, states with the collective security systems in each unions like NATO. This model includes the collapse of the incompetent and useless UN. The new system will concern to control integratedly the world-wide problems such as gross world security, population distribution, environmental matter and distribution food-energy sources. Our Japanese and governmental affairs should notice the current of the times mentioned above and make the plan to contribute such world-wide change and current, immediately.
