According to the report of 'The subcommittee for Mt. Bandai eruption in 1888' by the expert research council concerning the study of disaster instructions in the Central Disaster Prevention Council under the Cabinet Office, approximately 100 photos taking scenes of the 1888 eruption of Mt. Bandai were identified until now.

Presently we found out 8 new photos about the scenes of the Mt. Bandai eruption and investigated in details the volcanic phenomena during the eruption. The results will be published in the exhibition 'Mt. Bandai Eruption from Photos' at Mt Bandai Museum in July of this year.
