<http://www.asomuse.jp/>

There are variety configurations and scenes formed by a sequence of volcanic activities around the Aso caldera area. And it has made the own dimensions of animals, vegetations, climates, life styles and cultures. These factors are very important when we study the earth's works, and they are excellent things as the study, education, and tourism.

In Aso area, we have many valuable geological heritages, we hope to establish Aso Geopark by conservation and exploit of them.
