Time concept of geologist Charles Darwin

Michiko Yajima[1]

[1] GUPI

This year 2009 is the Darwin Year, because

Charles Darwin was born in 1809 and published the Origin of Species. Darwin is recognised as not geologist but as biologist and evolutionist. He is a great geologist and palaeontologist. He made geological survey of South America, discussed origin of coral reef, described fossil Cirripedia, discussed classification of Cirripedia, made survey of geology of central England, worked as secretary of Geological Society (London), got Wollaston Medal, and so on. I will discuss his time concept as geologist.
