## Utilization of the active fault database of Japan presented by AIST

Toshikazu Yoshioka<sup>1\*</sup>, Fujika Miyamoto<sup>1</sup>

<sup>1</sup>Active Fault and Eq. Res. Ctr, AIST/GSJ

Active fault database presented by AIST is opened to the public through the Internet. The number of accesses to this database have been increased up to 100,000 pages view in a month, especially just after a large earthquake or a special television program about earthquakes and active faults. After the domain and access analysis, the main users of this database are citizens, and they may want to know the existence of active faults near their houses.

Keywords: active fault, database, information, utilization, citizen
