Approach to recognizes "Earthquake" with society

Kazuyuki Nakagawa^{1*}

¹JijiPress

I wrote "No one knew the earthquake" in the belt of the book "Daishinsai wo Ikinuku" that published in three months after the earthquake with Jiji Press. The reason for even the researcher of the earthquake is that it is thought that it did not know the damage indirectly directly of the earthquake's causing it to the big city of the contemporary society in Japan even if it understands in it as for the scale and the mechanism of the occurring earthquake. Of course, mass media. What does the scientist who learns the earthquake examine after 15 years, and can the whole society learn the earthquake?

These 15 years are reviewed from the approach of the academic society, the government, and the municipality.

Keywords: scientist, community, mass media, Earthquake, disaster reduction, convincing
