NECESSArray (NorthEast China Extended SeiSmic Array) is a temporal broadband seismic array deployed in northeast China. Together with Chinese and US collaborators, we deployed 120 broadband seismic stations in NE China in September of 2009. The network will be operated for two years until the summer of 2011. First-data retrieved in November 2009 show very quiet recording condition, and some of them will be presented.

Keywords: broadband seismic network, China
