Co-seismic deformation of the two earthquakes at Laos (May 2007, Mw6. 3) and Yunnan (Jun 2007, Mw6.1)

Nobutaka Serizawa<sup>2\*</sup>, Masato Furuya<sup>1</sup>

<sup>1</sup>Hokkaido University, <sup>2</sup>Hokkaido University

On May 16, 2007, an earthquake with moment magnitude (Mw) 6.3 took place near the northern border of Laos. Two weeks later, on June 2, another large earthquake (Mw6.1) occurred at Yunnan, China, near the nation boundaries between China and Laos. Using L-band ALOS/PALSAR data, we apply interferometric synthetic aperture radar technique in order to detect the associated co-seismic crustal deformation.

Keywords: coseismic deformation, SAR, InSAR
