¹Dpt. of Phys., Tokyo Gakugei Univ., ²Joshiseigakuin High School, ³Fugen Decommissioning Eng. Center, JAEA, ⁴National Institute of Radiological Sci.

In the view of global electrical circuit, variations of fair-weather atmospheric electric field simultaneously show similar signatures all over world. Meanwhile, the mountain-top observation of atmospheric observation field shows local-time dependent variation. Our concurrent observation of atmospheric electric field and photo camera shows that this variation is caused by cloud-sea electrical charges.
